MESA SOUTHWEST MUSEUM BULLETIN NO. 10

**Bulletin no. 10**

Richard S. White, Gary S. Morgan, Mary E. Thompson, eds.

Produced to coincide with the annual meeting of the Society of Vertebrate Paleontology in 2005, *Pliocene Vertebrate Faunas of Southeastern Arizona and Southwestern New Mexico* serves as a guidebook for scientific excursions to important Pliocene fossil localities. The authors have provided detailed exploration histories, mileage estimates, and descriptions of preeminent fossil-rich areas from which many of the region's largest Pliocene animals such as *Rhynchotherium* and *Glyptotherium* have been unearthed. In addition to the spectacular fossils, the volume also includes interesting historical background to some of the notable and unusual personalities in the field. 59 pages.
